ABSTRACT

MCLAWHORN, TRACY ELIZABETH. A Textual History of John Donne’s “The Will.” (Under the direction of M. Thomas Hester.)

The purpose of my thesis is to explain the process used to establish the copy-text of John Donne’s poem “The Will” and examine the problems that arose in this process. I first consulted thirty-four manuscript versions and the seven seventeenth-century versions of this poem and transcribed these texts into files generated by the Donne Variorum Frame File Generator program. Collating these texts (using the Donne Variorum Collation software) allowed me to determine textual patterns and create a schema of textual relationships. The most significant verbal variant found among manuscript versions of “The Will” is the inclusion or omission of the third stanza (resulting in a 6-stanza or 5-stanza version). Based on the textual evidence and my interpretation of the poem, I believe that Donne first wrote a 6-stanza text and later revised this text to a 5-stanza version. The O’Flahertie text, referred to as H6 in the Donne Variorum, is a 6-stanza text that I use as the copy-text for “The Will.” The O’Flahertie text is used because, based on my textual analysis, I believe this text to be the version that is closest to what Donne actually wrote. Along with the copy-text, my thesis includes a textual apparatus listing all variants, a schema of textual relationships, textual notes, and an interpretation of the poem.
A Textual History of John Donne’s “The Will”

PERSONAL BIOGRAPHY

Tracy Elizabeth McLawhorn received her undergraduate degree in English Literature with a minor in Psychology from North Carolina State University. As an undergraduate, she was elected to Phi Kappa Phi and Phi Beta Kappa and graduated Summa Cum Laude. Continuing at North Carolina State University for her graduate studies, she worked on the *John Donne Journal* and *Renaissance Papers* under the guidance of her advisor, Dr. M. Thomas Hester. Tracy is currently immersed in her doctoral studies at the University of Southern Mississippi under the guidance of Dr. Gary Stringer.
ACKNOWLEDGEMENTS

I would like, first of all, to thank Dr. M. Thomas Hester, Dr. Brian Blackley, and Dr. R. V. Young for their guidance on this project as well as for their never-ending support of all of my pursuits throughout my studies at North Carolina State University. I am also grateful to my fellow graduate students at North Carolina State University, especially Lara Massey, whose encouragement and assistance was invaluable. Finally, thank you to my family and friends, without whose support this project would not have been possible.

I. Introduction

The purpose of my thesis is to explain the process used to establish the copy-text of John Donne’s poem “The Will” and examine the problems that arose in this process. The following pages present: 1) Copy-text. The copy-text I have chosen is taken from the O’Flahertie manuscript, a collection of 169 of Donne’s poems. Peter Beal notes “this MS is the largest extant MS collection of Donne’s poems” and thinks this manuscript was used in preparing the 1635 edition of Donne’s Poems. The title page indicates the manuscript was completed on October 12, 1632. The Beal number for the O’Flahertie manuscript is Δ 17 and the Traditional siglum is O’F. The Variorum siglum is H6, with the “H” indicating that the manuscript is held at the Harvard library. I will use H6 to refer to the O’Flahertie manuscript in accordance with the Donne Variorum nomenclature. 2) Textual Apparatus. The textual apparatus is created by collating all texts against the copy-text then listing the variants. As well as variants, the textual apparatus lists the texts collated, texts unavailable for collation, headings, and subscriptions. The variants are listed by line of text. The word or phrase found in H6 is written in front of the bracket and all variants—and the manuscripts which contain these variants—are written after the bracket. I have included all variants, including spelling and punctuation, no matter how trivial. Since every variation is listed, one could presumably recreate any chosen text of the poem by using the copy-text and textual apparatus. 3) Schema of Textual Relationships. The schema is, in essence, a type of “family tree” noting how texts evolved from the Lost Original Holograph (LOH). The LOH is the original text written by Donne but no longer extant. Properties of the LOH

are discovered by tracing the history of variants to determine when (relative to other manuscripts) the changes were made and, subsequently, what words the original text most likely contained. In the case of “The Will,” there is also a Revised Lost Holograph (RLH), a text revised by Donne, but again, no longer extant. The RLH for this text gives a version of the poem that omits the controversial third stanza, thus resulting in a 5-stanza poem. In the schema, manuscripts with similar properties are grouped together. These groups are named with arbitrary Greek letters ( β, γ, χ, π, and δ) and numbers. The same Greek letter is used for all groups at the same level of transmission, and when there is more than one group on the level, a number follows the Greek letter to differentiate between the groups. For example, on the first level of transmission, groups of manuscripts are named β1 and β2, with the β indicating a particular level of transmission and the numbers differentiating separate groups. Also listed on the schema are the variants which set groups of manuscripts apart from other manuscripts and the line number in which these variants occur. Although the schema is presented on two pages, there is no break in the transmissive history; the manuscripts derived from the RLH are presented on the next page simply because the schema is too large to fit on one page.

4) Textual Notes. This section presents factors that are pertinent in determining the textual history of “The Will” as well as problems that arose in this process. Sub-headings within this section are A) 5- and 6-stanza Versions of “The Will,” B) Major Textual Variants, C) Meter, D) Scribal Changes and Authorial Revisions, and E) H6 as Copy-Text.

Topics stemming from my textual work that will be discussed are the 5- and 6-stanza versions of the poem, the impact of major verbal variants on the poem, metrical patterns and variations from that pattern, scribal changes and authorial revisions, and the
emergence of the H6 (O'Flahertie) text as the best copy-text for this poem. Also included are a brief interpretation of the poem and an explanation of how to use F-Gen and DV-Coll software in the process of creating a transmisssional history.
II. Copy-Text (O'Flahertie, H6)

The Will

Before I sigh my last gaspe, Let mee breath
(Generall Loue) some Legacyes. Heere I bequeath
Mine eyes to Argus, if mine eyes can see,
If they bee blind, then, Loue, I giue them thee.
My tongue to Fame, t'Embassadors mine eares
    To woemen, or the Sea my teares.
Thou loue hast taught mee heeretofore
By making mee serue her who had twenty more
Onely to giue to those which had to much before.

My Constancy I to the Planets giue
My Truth to them who at the Court doe liue
Mine Ingenuity and opennesse
To Iesuits, to Buffons my pensiuenesse
My Silence to Any who abroad hath bin
    My monny to a Capuchin.
    Thou loue taught'st mee by making mee
To loue there where no Loue receaud can bee
Onely to giue to those which haue an Incapacity.

My fayth I giue to Romane Catholiques
All my good workes vnto the Schismatiques
Of Amsterdam, My best Ciuility
And Courtshipp to an Vniuersity
My Modesty I giue to Souldiers bare
    My patience let Gamsters share.
    Thou loue taughtst mee by making mee
Loue her that holds my Loue disparity
Onely to giue to those that count my gifts Indignity.

My reputation I giue to those
Which were my frinds; mine Industry to foes
To Schoolemen I bequeath my doubtfulnesse
My Sicknesse to Phisitians or excessse
To Nature all that I in rime haue writt
    And to my company my witt.
    Thou Loue by making mee adore
Her that begot this Loue in mee before
Taughtst mee to make as though I gaue when I doe but restore.
To Him for whome the passing Bell next towles  
I giue my Phisick bookes; my written rolles  
Of Morrall counsells I to Bedlam giue  
My Brasen Medalls vnto them that liue  
In want of bread; To them which passe among  
    All forrayners my English tongue.  
(Thou loue) by making mee loue one  
Who thinkes her frindship a fitt portion  
For younger louers dost my gifts thus disproportion.  

Therefore Ile giue no more, but Ile vndoe  
The world, by dying, because Loue dyes too  
Then all your Beautyes will bee no more worth  
Then gold in mines where none doth draw it forth  
And all your Graces no more vse shall haue  
    Then a Sunn dyall in a Graue.  
    Thou Loue taughtst mee by making mee  
Loue her who doth neglect both thee and mee  
To invent and practise this one way to annihilate all three.

V.a. 5- and 6-stanza versions of “The Will"

The major textual variants among manuscript versions of “The Will” originate with the inclusion or omission of the third stanza (resulting in a 6-stanza or 5-stanza version). Each of the nine manuscripts (B46, B47, C9, H5, H6, H7, H8, HH4, and Y2) that include the 6-stanza version is classified as a Group III manuscript; however, not all Group III manuscripts contain the 6-stanza version. Group III manuscripts are traditionally the earliest manuscripts, followed by Groups I and II, respectively. The schema of the transmissional history of this poem, in fact, corroborates the classification of Group III as the earliest group of manuscripts. It also establishes that the 6-stanza version of “The Will” is earlier than the 5-stanza version (B2, B7, B13, B14, B23, B30, B32, B40, C1, C2, C5, C8, CT1, H3, H4, HH1, O20, O21, O34, SN4, SP1, TT1, TT2, VA2, WN1, and Y3), which is a revision of the original text (labeled on the schema as “Revised Lost Holograph”).

Evidence that the third stanza was removed from a 6-stanza version rather than the stanza’s later being added to the 5-stanza version comes from both the transmissional history and content-based conjecture. For example, in the manuscripts that follow the 6-stanza version, the first lines of the third stanza read

My fayth I giue to Romane Catholiques
All my good workes vnto the Schismatiques
Of Amsterdam . . . (19-21)\(^1\)

while the penultimate line of the stanza indicates that between “fayth” and “Romane Catholiques” and between “good worked” and “Schismatiques / Of Amsterdam” there is “disparity” and the last line implies that the religious groups would find the speaker’s

---
\(^1\) All quotations from “The Will” are taken from the O’Flahertie MS unless otherwise noted.
gifts to be an “Indignity.” Such an unflattering depiction of Catholic and Calvinist faith would have been quite controversial in Donne’s time, so Donne most likely revised the poem to a 5-stanza version as it circulated among friends who might take offense to the stanza or as the poem spread beyond the immediate coterie.

On the other hand, all of the seven seventeenth-century printed editions (1633-69, listed as A-G in the textual apparatus and schema) print the 6-stanza version of the poem. Since these editions were not printed until after Donne’s death, the third stanza would not present a threat and therefore would not need to be omitted. The transmissional history of “The Will” suggests that the Seventeenth-Century printed editions stem from the γ1 group, where the change to “I giue my reputation” in line 28 is made.

V.b. Major Textual Variants

While the main textual variant among the manuscript versions of “The Will” is the omission of the third stanza, there are also other important verbal differences in both the group of 6-stanza manuscripts and the 5-stanza manuscripts. The group of 6-stanza poems contain changes that are more significant than the variants found within the 5-stanza versions, and include some variants that are likely authorial revisions rather than scribal changes or errors. The most significant verbal variants among the 6-stanza poems are as follows:

- MS stemming from H8: line 9 reads “That I should giue to none, but such as” for “Onely to giue to those which”; line 16 reads “appointing” for “making”; line 18 reads “such as” for “those which”

- γ1 Group: line 28 reads “I giue my reputation” for “My reputation I giue”
• β2 Group: line 8 reads “loue” for “serue”
• γ2 Group: line 17 reads “could” for “can”

The verbal differences between the Lost Original Holograph and the Revised Lost Holograph can be traced through the MS stemming from H8 and the γ1 group. The Revised Lost Holograph stems from the γ1 group, as do the 6-stanza manuscript HH4 and all seventeenth-century printed editions. However, the Revised Lost Holograph could not have been derived directly from HH4 because the Revised Lost Holograph omits the third stanza while HH4 includes the third stanza and the HH4 manuscript has irregularities that do not show up in manuscripts derived from the Revised Lost Holograph. For example, HH4 splits lines 9, 36, 45, and 54—the last lines of stanzas 1, 4, 5, and 6—into two separate lines, while the 5-stanza manuscripts leave these lines intact. Also, HH4 omits the word “to” in line 5, adds the word “my” in line 12, and ends line 53 with “ye & mee,” but the manuscripts stemming from the Revised Lost Holograph include the word “to,” omit the word “my,” and conclude line 53 with “mee and thee.” However, the most important irregularity in HH4 that does not appear in the 5-stanza versions is the placement of the third stanza at the end of the poem in the HH4 text. This particular feature of the HH4 text will be discussed in more detail later. The irregularities found in the HH4 text that are not present in the 5-stanza manuscripts prove that the Revised Lost Holograph was not created from the HH4 text. However, from the similarities in the HH4 text and the Revised Lost Holograph (variants that set these manuscripts apart from other groups of manuscripts) we can deduce that HH4 and the Revised Lost Holograph stem from the same group (γ1) even though they are not directly connected.
The verbal variants in the manuscripts derived from the Revised Lost Holograph—the manuscripts containing 5-stanza versions of the poem—are most likely scribal errors or scribal changes. The most significant variants are as follows:

- \( \pi_2 \) Group: line 49 reads “golden” for “gold in”
- \( \delta_2 \) Group: line 45 reads “young” for “younger”
- \( \pi_3 \) Group: line 47 reads “I” (C5 VA2) or “ile” (O34) for “Loue”
- \( \pi_4 \) Group: line 17 reads “could” for “can”
- \( \pi_5 \) Group: line 29 reads “who” for “Which”
- \( \delta_4 \) Group: line 9 reads “enough” for “to much”

These changes are, in general, not as important as the variants listed among the 6-stanza manuscripts because they affect relatively few manuscripts or do not affect the meaning of the poem significantly. I do not accept these variants as authorial changes because the original wording gives a more complex reading than the variants listed above. These variants are changes most likely produced by scribal error or by intentional scribal changes.

V.c. Meter

Another facet of “The Will” that apparently has been affected by scribal changes is the poem’s meter. “The Will” combines lines of varying lengths while keeping the pattern between stanzas consistent. The general metrical pattern for each stanza is as follows: lines 1-5 in iambic pentameter, lines 6-7 in iambic tetrameter, line 8 in iambic pentameter, and line 9 in iambic heptameter. However, the H6 manuscript (and most other manuscript versions as well as early printed editions and even modern editions)
deviates from the metrical pattern at times. Most of the words which seem to produce metrical irregularities in H6 (as well as in other versions) can be easily regularized through elisions or revised pronunciation. For example, line 8 in the H6 text reads “By making mee serue her who had twenty more.” To make this line fit into the pattern of iambic pentameter, “who had” must be contracted into one syllable, such as “wh’had.” Most manuscripts either contain some form of elision or create verbal variants to make the line scan properly. Most likely, the lines were originally meant to scan properly, whether the elisions were written in or were just assumed.

However, line 9 in the β1 and β2 groups, which includes the H6 text, is iambic hexameter instead of heptameter. The group based on the H8 text, from which the Revised Lost Holograph is ultimately derived, gives alternate wording for line 9, resulting in the regularization of the metrical pattern but breaks the verbal pattern of “Onely to giue” found in the last lines of the first three stanzas. Since the pattern is dropped in the last three stanzas anyway, one might conclude that deviating from the pattern in the first stanza is relatively unimportant. However, the change to “That I should giue,” even through introducing an original verbal construction, compromises the integrity of the repetition in the second and third stanzas. By having “Onely to giue” in the first stanza, a model is presented for the second and third stanzas, but when the pattern is only found in the second and third stanzas, repetition seems to indicate a lack of originality rather than a verbal pattern. Perhaps the deviation from the metrical pattern in line 9 is intentional and is meant to stop short a stanza that has focused on “those which had to much before” (9). The speaker lists bequests throughout the poem that are inappropriate and the shortened line is a perfect ending to a stanza about excess.
Therefore, because of the verbal pattern of the first three stanzas and the possibility that line 9 intentionally breaks from the metrical pattern, I conclude that line 9 originally read “Onely to giue” and the alternative reading “That I should giue” is most likely a scribal change with the purpose of regularizing meter rather than an authorial revision.

V.d. Scribal Changes and Authorial Revisions

Among the significant verbal variants, only a few seem to be authorial revisions. Other types of revisions are scribal changes and trivializations. A revision is authorial only if the evidence points to a change made purposefully by the author, usually resulting in a more complex reading. Scribal changes occur when someone other than the author purposefully changes the text, perhaps as an intended improvement or perhaps in response to seeing another version of the poem. If the change seems to be an error or oversight rather than a purposeful revision, the change is called a scribal trivialization. Many scribal trivializations that could seem far-fetched today were easy mistakes to make in a manuscript culture, where, for example, “e” and “r” are sometimes nearly identical. One example of a scribal trivialization can be found in the last line of the poem: “To invent and practise this one way to annihilate all three” (54). The B13, C1, and G texts include the scribal trivialization “thee” in place of “three.” Since the original text gives a more complex reading, I conclude that the variant “thee” is a scribal trivialization rather than an authorial change.

The main authorial revision is the emendation of the poem from a 6-stanza version to a 5-stanza version, as noted above. The only other verbal variant that seems to be an authorial revision is the change from “My reputation I giue” to “I giue my
reputation” at the beginning of line 28 in the γ1 group. All 6-stanza versions read “My reputation I giue” except for HH4, which, along with all 5-stanza versions, reads “I giue my reputation.” The change appears to be an authorial change made in response to the decision to provide a 5-stanza version of the poem by removing the third stanza. In the 6-stanza versions, the original wording of line 28 preserves the verbal pattern of “My . . . I giue” found at the start of stanzas two through four: “My Constancy I to the Planets giue” (10), “My fayth I giue to Romane Catholiques” (19), and “My reputation I giue to those / Which were my frinds” (28). However, with the elimination of the third stanza, the pattern is found in only two stanzas, and seems less of a pattern than unbalanced repetition. Donne revised line 28 to begin “I giue my reputation,” thus allowing for diverse openings for each stanza instead of having only two stanzas that begin in the same manner. When the poem was revised to create a 5-stanza version, Donne modified line 28 in order to avoid the unbalanced repetition that the original wording of the line would have caused.

The problem with the above theory is the inclusion of HH4, a 6-stanza version, in the γ1 group. If the change to “I giue my reputation” is an authorial change made in response to the removal of the third stanza, then it seems that HH4 should have kept the unaltered reading. The variant “I giue my reputation” being found in the HH4 text can be explained based on the placement of the third stanza within this text. The third stanza appears as the last stanza in the HH4 text, which means that the scribe of HH4 text probably used a 5-stanza version of the poem, but also had access to the “missing” third stanza. In essence, then, HH4 is a 5-stanza manuscript with the third stanza, acquired from another source, added at the end. From the evidence presented, we can speculate
that the change in line 28 was an authorial revision made in response to the creation of a 5-stanza version of the poem. The result of the change is that instead of having the unbalanced repetition that would come from removing the third stanza without altering line 28, Donne adapts the text to create a different opening for the fourth stanza when the poem is presented as a 5-stanza text. Therefore, if we were to read the poem as a 5-stanza text, the authorial change in line 28 should be followed, but if we read the poem as a 6-stanza text, the original wording should be kept.

V.e. H6 as Copy-Text

The objective in choosing a copy-text is to find “the least corrupted surviving version(s)”\(^2\) (LII) of the poem, as is the practice of the Donne Variorum editors. Running collations and creating a schema of textual relationships help in finding such a text. Also helpful are other schemas and textual histories of Donne’s poems, although these considerations are always secondary to textual evidence.

Mainly, my choice of H6 as copy-text for “The Will” is based on elimination of unsuitable texts. I eliminated all 5-stanza versions of the poem for two key reasons: first, presenting a text containing the third stanza enables a better reading of the poem, and secondly, the textual history suggests that the 6-stanza manuscripts are earlier than the 5-stanza manuscripts and are therefore less susceptible to corruption. Deciding to use a 6-stanza version reduced my choices for a copy-text to only nine manuscripts. Again, the schema of textual relationships allowed me to map the emergence of variants and therefore gain an understanding of what was most likely the original wording of the poem.

poem. The text that emerged as one of the manuscripts closest to the Lost Original Holograph (in other words, appears early in the transmissional history) and is “the least corrupted surviving version” is the O’Flahertie manuscript (H6).

Two other manuscripts that viably could have been chosen instead of H6 are C9 (Luttrell) and H5 (Dobell). H6 and C9 are cognates (brother manuscripts from the same parent) and have only minor differences. I looked to the *Donne Variorum* to help me with my decision. The *Donne Variorum* editors consider H6 to be a better choice than C9 (429-40); therefore I also chose to use H6 rather than C9. The choice between H5 and H6 was more difficult to make. The most important discrepancy between these two texts is in line 8, where H6 reads “serue” and H5 reads “loue.” This variant is found in the latter section of the first stanza: “Thou loue hast taught mee heeretofore / By making mee [serue / loue] her who had twenty more / Onely to giue to those which had to much before” (7-9). “Serue” seems to be the better choice because it suggests the speaker’s lowly status in reference to his beloved and the extent to which he worships her. The H5 reading of “loue,” while adequate, does not carry the same subservient tone as “serue.” The meaning implied by “serue” is that the speaker is not only openly demonstrating his adoration of the woman, but also taking on a submissive role in the unequal relationship. Much of this impact is lost with the variant “loue” because this word does not suggest the inequality of the two lovers or the woman’s dominance over the speaker. Therefore, “loue” is probably a scribal change, made to complement the other uses of “loue” prevalent throughout the poem, but “serue” is the original term. Since H6 reads “serue,” this text is closer to the Lost Original Holograph and therefore a better choice for copy-text than H5.
VI. Interpretation

The ultimate reason for establishing the text that the author most likely wrote is to enable us to understand the poem. Interpretation is influenced by the particular text used and the ways in which one discovers the text to have been altered over time. The textual issue most relevant to an interpretation of “The Will” is the inclusion or omission of the third stanza. Gardner offers the possibility that the third stanza was intended as an alternative to the second stanza, and, even though she prints a 6-stanza version, she concludes that the poem is, in fact, a 5-stanza poem. Redpath agrees that the second and third stanzas were alternatives, noting the overlap in the content of these stanzas as support for Gardner’s theory. Both Gardner and Redpath are responding to Grierson’s theory that the poem originally had 6-stanzas but that the third stanza was omitted in some manuscripts because of its controversial content. My textual findings support Grierson’s view that the poem originally contained six stanzas and was emended to a 5-stanza version at a later date. However, while critical emphasis has concentrated on the overlap in the second and third stanzas, there is overlap between other stanzas as well. Moreover, the third stanza does not work as an alternative to the second stanza because the overarching point of the third stanza, rather than mirroring points made in other stanzas, establishes an altogether different reason for which the woman rejects the speaker.

Her rejection, in fact, is the original cause of the speaker’s sarcastic, caustic resentment of the flawed love offered and now denied to him by his beloved. As he details the ways in which the beloved has wronged him, he bequeaths parts of himself
and his estate in a parody of a last will and testament, bestowing possessions to particular recipients as deemed appropriate based on a model he has created from what he sees as his beloved’s unfair treatment of him. In this model, the speaker uses the way the woman has mistreated him as the basis for his pattern of bequests; thus, the inappropriateness of his bequests illustrates the inappropriateness of the woman’s treatment of him. The different rationales for his bequests in each stanza correspond to the way the woman mistreated him in that particular stanza. Each of the first five stanzas of “The Will” is set up in two sections. In the first six lines, the speaker lists his bequests, subtly giving examples of one particular kind of flawed love. The pattern of the bequests in the first six lines is brought together in the last three lines, which begin with a direct address to Love and explain how the beloved’s love was flawed. For example, in the first stanza, the speaker says that his beloved had “twenty more” lovers, therefore he gives his “eyes to Argus” based on the model that he should give to those who “had too much before.” The woman, by having twenty lovers, “had too much before” so the speaker thus patterns his bequests on the woman’s example.

The final stanza concludes the poem with an explanation of how the speaker’s bequests will affect the beloved. He has given away much of himself in the previous stanzas, but in the final stanza he gives up his life and consequently destroys the world: “. . . Ile vndoe / The world, by dying, because Loue dyes too” (46-47). The speaker suggests that the beloved will be nothing once she is no longer loved by him, and his demise will destroy Love as well as the beloved. The destruction of the speaker, Love, and the beloved comes about because of the beloved’s “neglect” of the speaker and Love.
Each stanza focuses on a specific way in which the woman’s treatment of the speaker is flawed. The kind of love experienced by the speaker and this woman—which is illustrated by the speaker’s complaint in each stanza—seems to be the opposite of the “ideal” love in Petrarchan poetry. The woman’s rejection of the speaker seems to be due to her failure to conform to the Petrarchan pattern of love. While the woman’s scorn of the lover would seem to place her within the Petrarchan tradition, the reasons for her rejection of the speaker prove to be based on immoral desires and superficial preferences rather than her virtue.

The woman’s flaw in the first stanza is that she “had twenty more,” (8) prompting the speaker “Onely to giue to those which had to much before” (9). The woman’s idea of love is unacceptable to the speaker because she has many lovers. By having other lovers, the woman proved herself to be unfaithful and inconstant. An ideal (or Petrarchan) woman would have only one lover and would be faithful to him, but the woman in this poem is unfaithful and, by taking other lovers, rejects the supposedly monogamous love offered by the speaker. In the second stanza, the speaker loved “where no Loue receaud can bee” (17), so he resolves “Onely to giue to those which haue an Incapacity” (18). The woman is incapable of receiving love, meaning she is cold and hardhearted. An ideal woman would be warm and caring, but this woman’s incapability to receive love is the basis of her rejection of the speaker.

The presentation of the woman’s flaw in the fourth stanza is not as straightforward:

Thou Loue by making mee adore
Her that begot this Loue in mee before
Taughtst mee to make as though I gaue when I doe but restore. (34-36)
At first, the situation appears to be Petrarchan in nature; the woman was the cause of the speaker’s love. Despite the conventional genesis of the love, the woman does not continue the relationship in a manner agreeable to the speaker or in keeping with his ideas of a perfect love. Rather than causing the speaker to fall in love with her so that the two lovers could pursue a meaningful love, the woman makes him love her solely to reject him. The woman was acting selfishly in causing the speaker to love her when she was not willing to love him in return. The woman uses love for self-serving purposes when she should have been nurturing a mutual love.

The fifth stanza is more easily understood. The woman “thinkes her frindship a fitt portion / For younger louers” (44-45), so the speaker gives out bequests in “disproportion.” The woman wants lovers that are young, implying that she finds the speaker to be too old for her, or at least for her tastes. Instead of being an appropriately matched couple, the speaker and the woman are imbalanced because of the difference in age. The woman’s desire to have younger lovers is the basis of her rejection of the speaker in this stanza.

The last stanza veers from the pattern of the previous stanzas when the speaker enumerates the effects his actions will have on the woman and the world rather than continuing his bequests. Yet the last three lines follow the pattern of the previous stanzas in that these lines present another way in which the woman’s love is flawed:

Thou Loue taughtst mee by making mee
Loue her who doth neglect both thee and mee
To invent and practise this one way to annihilate all three. (52-54)
The woman neglected both the speaker and Love, so the speaker responds in kind by annihilating himself, the woman, and Love, taking the idea of “neglect” to the utmost limits. This stanza ends the poem with a feat of destruction when, had the woman nourished their love rather than neglecting the speaker, the couple could have generated a wonderful new love or perhaps even an original model of love, thus engaging in an act of creation. Instead, the woman destroyed their love through “neglect.” The stanzas leading up to the final stanza demonstrate variations of the woman’s “neglect” through her rejections of the speaker and his love.

The woman’s rejects—and therefore “neglects”—the speaker the third stanza as well. The third stanza is proposed to be an alternative to the second stanza in the opinion of Gardner and Redpath. Along with their theories about how the text may have been altered over time, Redpath notes that there is “a certain overlap between the material and also between the general drift of the two stanzas” (123). But, as suggested above, the main idea of each stanza does establish the overall theme of rejection, or “neglect,” in the poem. The third stanza adds to the overall theme significantly and without repeating material found in the other stanzas:

Thou loue taughtst mee by making mee
Loue her that holds my Loue disparity
Onely to giue to those that count my gifts Indignity. (25-27)

The “disparity” is the woman’s belief that the speaker’s love is beneath her. She views the speaker as inferior to herself, perhaps owing to a difference in class, and views his love as unworthy of her consideration. Not only does the woman not want the speaker’s
love, she thinks that his offer of love is an “indignity.” The woman rejects the speaker in this stanza because she feels that he is too lowly to be worthy of her love.

By not including the third stanza in the text of this poem an important basis for the woman’s rejection of the speaker is excluded. For the remaining stanzas evince that the woman rejects the speaker because she is unfaithful and desires more lovers (stanza I), she is incapable of receiving love (stanza II), she caused the speaker to love her when she did not love him in return (stanza IV), she thinks he is too old and she wants younger lovers (stanza V), and she destroys their love through neglect (stanza VI). The third stanza presents what may be the most cutting rejection of all: the woman rejects the speaker because she thinks he is inferior to her. The reasons for rejection in the other stanzas have more to do with the character of the woman’s desires—she is incapable of love and she wants younger lovers—but the rejection in the third stanza seems to be based on an inadequacy inherent to the speaker. In the third stanza, the woman rejects the speaker not because he is too old and not because she wants more lovers, but simply because she does not want his love. The element of rejection based solely on the speaker’s personal inadequacy is not found in the other stanzas and makes the third stanza a vital part of the poem. The poem loses much of its impact if the third stanza is viewed as an alternative to the second stanza rather than another, integral part of the poem.

When deciding whether the third stanza should be presented as part of the original text, it is important to note both the thrust of the textual evidence and significant content of the stanza itself. Both point to the original inclusion of this stanza in the text. While tracing the textual history of a text is interesting its own right, the real purpose of
examining verbal variants and textual relationships is to try to recreate, as closely as we may, the text that the author wrote in order to understand the work.
VII. Appendix A: Process

The first step in establishing the copy-text is to find out in which manuscripts the poem appears by consulting Peter Beal’s *Index of English Literary Manuscripts*. Beal’s index gives a brief description of each text as well as the manuscript’s location and the page or folio numbers on which the poem can be found. “The Will” is found—in part or in whole—in 46 manuscripts.

After obtaining copies of each manuscript version of the poem and all 17th-century printed editions, the next step is to make transcriptions of these poems. The *Donne Variorum* has created two software programs—the Donne Variorum Frame File Generator (F-Gen) and the Donne Variorum Textual Collation Program (DV-Coll)—to aid in the transcription and collation process. The F-Gen program helps set up a template that will keep transcriptions uniform. To set up the initial F-Gen file, you enter the following information:

- 3-digit Work Siglum: designates the Donne poem with which you are working; based on the Shawcross numbering of the poems. This number will remain consistent for all of the transcriptions for an individual poem. Work Siglum for “The Will” is 066.

- 3-digit Source Siglum: designates which manuscript will be transcribed in this file; found in the *Donne Variorum*, the Source Siglum is alpha-numeric, with the letter(s) indicating the physical location of the manuscript. Source Siglum will change with each transcription. Source Siglum for the O’Flahertie MS: H6 (“H” indicating that the manuscript is in the Harvard University Library).
• Source Name: lists the name of the manuscript which will be transcribed in this file. Source Names can be found in Beal’s Index or the Donne Variorum. The Source Name will change with each transcription. For the H6 manuscript, the source name is “O’Flahertie MS.”

• Folio Number(s) / Page Number(s): records the folio numbers or page numbers on which the poem can be found for the manuscript being transcribed. The folio numbers or page numbers can be found in Beal’s Index. The folio numbers for the H6 text of “The Will” are 135r-v.

• Transcriber Name or Initials: records the name or initials of the person making the transcription. If only one person is working on the project, this information will not change for subsequent transcriptions. My entry is “tem.”

• Nature of Source: this pull-down menu gives the options “o” (original), “x” (xerox), “mf” (microfilm), and “fs” (facsimile). Choose the letter that corresponds to the type of source with which you are working. This information may change or remain the same for subsequent transcriptions. The Nature of Source for my transcription of the H6 text of “The Will” is “mf.”

• Entry Date: lists the date on which you make a transcription. This information will change for transcriptions made at a later date. The Entry Date for my transcription of the H6 text of “The Will” is “6-10-02.”

• Number of Lines of Headers: sets up the number of lines that will be available to record headings or titles. Even if the text is not titled in the manuscript first chosen for transcription, enter “1” to enable you to note that the header is omitted and to provide space for headers that may be found in other manuscripts. Once
you have entered the Number of Lines of Headers and have created the template, the lines that will be allotted for headers will remain constant for all transcriptions. The Number of Lines of Headers for “The Will” is “1.”

• Number of Lines of Text: sets up the number of lines that will be created in the template for text. Count the number of lines of text in a complete manuscript version or printed edition of the poem. Once the template is created, the number of lines allotted for text will remain constant. The Number of Lines of Text for “The Will” is “54.”

• Lines per Stanza: sets up the template to separate the text into stanzas. Enter the number of lines per stanza, or leave the designation at “0.” Choosing “0” is often the best choice since some manuscripts may not divide the poem into stanzas. If you choose the “0” option, you can denote the stanzaic form later in the transcription. “The Will” has 9 lines per Stanza, but I chose to indicate “0” in the F-Gen program.

• Generate Frame File: the last step. Sets up the F-Gen template using the information entered.

Once the template has been created, each transcription will be entered using the template. When transcribing manuscripts into F-Gen files, ASCII codes must be used to denote features such as underlining and italics. A list of the Donne Variorum ASCII control codes can be found at the Donne Variorum website. Figure 1 presents a transcription of the H6 text using the F-Gen program.
Before I sigh my last gaspe, Let mee breath
(Greate Loue) some Legacyes. Heere I bequeath
Mine eyes to Argus, if mine eyes can see,
If they bee blind, then, Loue, I giue them thee.
My tongue to Fame, t'Embassado%rs% mine eares
To woemen, or the Sea my teares.
Thou loue hast taught mee heeretofore
By making mee serue her who had twenty more
Onely to giue to those w%ch% had to much before
My Constancy I to the Planets giue
My Truth to them who at the Court doe liue
Mine Ingenuity and opennesse
To Iesuits, to Buffons my pensiuenesse
My Silence to Any who abroad hath bin
My monny to a Capuchin:
Thou loue taught'st mee by making mee
To loue there where no Loue receaud can bee
Onely to giue to those w%ch% haue an Incapacity
My fayth I giue to Romane Catholiques
Of Amsterdam, My best Ciuility
And Courtshipp to an Vniuersity
My Modesty I giue to Souldiers bare
My patience let Gamsters share.
Thou loue taughtst mee by making mee
Loue her that holds my Loue disparity
Onely to giue to those that count my gifts Indignity
My reputation I giue to those
W%ch% were my frinds; mine Industry to foes
To Schoolemen I bequeath my doubtfulnesse
My Sicknesse to Phisitians or excessse
To Nature all that I in rime haue writt
And to my company my witt
Thou Loue by making mee adore
Her that begot this Loue in mee before
Taughtst mee to make as though I gaue when I doe but restore
To Him for whome the passing Bell next towles
I giue my Phisick bookes; my written rolles
Of Morrall counsells I to Bedlam giue
My Brasen Medalls vnto them that liue
In want of bread; To them w%ch% passe among
All forrayners my English tongue
(Thou loue) by making mee loue one
who thinkes her frindship a fitt portion
ffor younger louers dost my gifts thus disproportion
Therefore Ile giue no more, but Ile vndoe
The world, by dying, because Loue dyes too
Then all yo%5r%6 Beautyes will bee no more worth
Then gold in mines where none doth draw it forth
And all yo%5r%6 Graces no more vse shall haue
Then a Sunn dyall in a Graue
Thou Loue taughtst mee by making mee
Loue her who doth neglect both thee and mee
To invent and practise this one way to annihilate all three
[can't read-may be first words of next poem]
l. 28: "I giue" also written at bottom of p. 287. ln. 36: "restore" written above the line. Ln. 54: "three" written above the line. Indentions: lines 6 & 7 of each stanza indented one tab.
Once all transcriptions are complete, use the DV-Coll program to collate the files. Collation allows you to see all variations from the text against which the files are collated. For example, the last word of the first line of “The Will” reads “breath” in the H6 text, which all other texts were collated against. From the collation, you can see that “breath,” and “breathe” are the variants found in other manuscripts. The DV-Coll program allows you to collate at either word-level or line-level. Collations should be performed at word-level when manuscripts have numerous variants. The order in which the files are entered into the DV-Coll list determines the order in which they will appear in the collation; therefore, all files will be collated against the first file in the collation list.

Collations help you to see patterns of variants, which in turn allow you to determine which text is the best choice for the copy-text as well as which manuscripts should be grouped together. All texts should be collated against the copy-text in order to create the textual apparatus. It is often helpful to run additional collations with fewer texts—often texts that traditionally have a connection—in order to note patterns that will help to establish sub-groups. Once collations have been run and patterns have been established, create a schema of textual relationships based on the patterns observed through the collation process. Figure 2 gives an example of one line of a collation. This particular example shows a collation of all texts against the copy-text (H6) and consists of only the first line of the poem.
